PROFESSIONAL SUMMARY

DevOps and DevSecOps professional with **15 months of hands-on internship experience** in cloud infrastructure automation, Infrastructure as Code (IaC), CI/CD engineering, and secure cloud deployments. Advanced expertise in **HashiCorp Terraform**, including reusable modules, remote state management, state locking, backend configurations, and infrastructure lifecycle management. Experienced in implementing **Azure Landing Zones, Hub-and-Spoke Network Architecture, and Multi-Cloud Infrastructure** across Microsoft Azure, AWS, and GCP. Hands-on experience with Azure DevOps, GitHub Actions, YAML-based CI/CD pipelines, and DevSecOps security tools. Practical experience with **Google Antigravity and AI-assisted DevOps workflows**, including Terraform code generation, AI agent-based task automation, infrastructure troubleshooting, and CI/CD pipeline debugging.

TECHNICAL SKILLS

- **Infrastructure as Code:** HashiCorp Terraform (Advanced), Terraform Modules, Remote State, State Locking, Backend Configuration, Terraform Workspaces, Terraform Import, State Management, Dynamic Blocks, for_each, count, Lifecycle Management
- **Azure Services:** Azure Virtual Machines, Azure Virtual Network (VNet), Network Security Groups (NSGs), Azure Storage, Azure Key Vault, Azure Role-Based Access Control (RBAC), VNet Peering
- **AI & Intelligent Automation:** Google Antigravity, AI Agents, AI-Assisted Infrastructure Automation, AI-Assisted Terraform Development, AI-Assisted Code Generation, Infrastructure Troubleshooting, AI-Assisted CI/CD Pipeline Debugging
- **Cloud Platforms:** Microsoft Azure (Primary), Amazon Web Services (AWS), Google Cloud Platform (GCP)
- **Cloud Architecture:** Azure Landing Zones, Hub-and-Spoke Network Architecture, Azure Networking, Multi-Cloud Infrastructure, Cloud Infrastructure Provisioning
- **DevOps & CI/CD:** Azure DevOps, Azure Pipelines, GitHub Actions, YAML Pipelines, Git, GitHub, Continuous Integration, Continuous Deployment, Infrastructure Deployment Automation
- **DevSecOps & Security:** tfsec, TFLint, SonarQube, Terraform Security Scanning, Terraform Linting, Static Code Analysis, Shift-Left Security, Azure Key Vault
- **FinOps & Cost Analysis:** Infracost, OpenCost, Infrastructure Cost Estimation, Cloud Cost Analysis, Cost Visibility
- **Programming Languages (Basic):** Java, Python, C++
- **Scripting Languages (Basic):** Bash, PowerShell
- **Configuration Languages:** YAML, HashiCorp Configuration Language (HCL)
- **Operating Systems:** Linux (Ubuntu), Linux Command Line (CLI), Basic SSH, Basic Linux Networking, Basic Linux Commands

PROFESSIONAL EXPERIENCE

Davin Technologies

3 Months | July 2026 – October 2026

DevOps Intern

Key Responsibilities:

- Automated cloud infrastructure provisioning and configuration management using **HashiCorp Terraform and Infrastructure as Code (IaC),** supporting reusable infrastructure configurations.
- Worked with **Azure DevOps and YAML-based CI/CD pipelines** to automate Terraform infrastructure validation and deployment workflows.
- Applied **tfsec, TFLint, and SonarQube** for Terraform security scanning, configuration validation, and static code quality analysis.
- Supported infrastructure troubleshooting, deployment automation, and Git-based configuration management to maintain consistent infrastructure workflows.

DevOps Insider

1 Year | June 2025 – June 2026

DevOps & DevSecOps Intern

Key Responsibilities:

- Designed and provisioned **multi-cloud infrastructure across Microsoft Azure, AWS, and GCP** using HashiCorp Terraform and Infrastructure as Code (IaC).
- Developed reusable **Terraform modules** and implemented remote state management, state locking, backend configurations, workspaces, and infrastructure lifecycle management.
- Implemented **Azure Landing Zones and Hub-and-Spoke Network Architecture** using modular Terraform configurations for structured cloud infrastructure deployment.
- Developed and maintained **Azure DevOps YAML pipelines and GitHub Actions workflows** for automated Terraform validation, infrastructure planning, and deployment.
- Applied **DevSecOps practices** using tfsec, TFLint, and SonarQube for infrastructure security scanning, configuration validation, and code quality analysis.
- Utilized **Infracost** for Terraform infrastructure cost estimation and worked with **OpenCost** for cloud-native infrastructure cost analysis and cost visibility.
- Leveraged **Google Antigravity and AI-assisted DevOps workflows** for Terraform code generation, infrastructure troubleshooting, AI agent-based task automation, and Azure DevOps YAML pipeline debugging.

TECHNICAL PROJECTS

Azure Landing Zone & Hub-and-Spoke Architecture

Technologies: Terraform | Microsoft Azure | Cloud Networking | IaC

- Designed and deployed **Azure Landing Zone infrastructure and Hub-and-Spoke Network Architecture** using Terraform-based Infrastructure as Code.
- Developed reusable Terraform configurations to automate Azure infrastructure provisioning and support structured cloud network deployments.

Multi-Cloud Infrastructure Automation

Technologies: Terraform | Azure | AWS | GCP | HCL

- Automated cloud infrastructure provisioning across **Microsoft Azure, AWS, and GCP** using HashiCorp Terraform.
- Developed reusable Terraform modules for multi-environment deployments, incorporating remote backend configuration, state locking, and infrastructure state management.

Terraform CI/CD & DevSecOps Automation

Technologies: Azure DevOps | GitHub Actions | Terraform | tfsec | TFLint | SonarQube | Azure Key Vault

- Developed **Azure DevOps YAML-based CI/CD** pipelines to automate Terraform validation, infrastructure planning, and deployment workflows.
- Integrated **tfsec, TFLint, and SonarQube** into DevSecOps workflows to support security scanning, infrastructure configuration checks, and code quality validation.

AI-Assisted DevOps & Infrastructure Automation

Technologies: Google Antigravity | AI Agents | Terraform | Azure DevOps

- Leveraged **Google Antigravity** for AI-assisted Terraform code generation, configuration refinement, and Infrastructure as Code development.
- Utilized **AI agents** to assist with automated task execution, infrastructure troubleshooting, and identification of Terraform configuration errors.
- Applied AI-assisted workflows to create, review, and debug **Azure DevOps YAML pipelines**, supporting CI/CD troubleshooting and development productivity.

Infrastructure Cost Analysis & FinOps

Technologies: Infracost | OpenCost | Terraform

- Used **Infracost** to estimate cloud infrastructure costs from Terraform configurations and analyze infrastructure cost implications.
- Worked with **OpenCost** for cloud-native resource cost analysis and infrastructure cost visibility.

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science

ISBM University | Chhattisgarh, India

June 2023 – Present | Expected Graduation: July 2027
